

Student 4: High Achieved  
NZQA Intended for teacher use only

**FINE TUNING!**

I decided to use a white material to make my signage, clean, smart look of the design of my building.

Wind exactly should I hang from the ceiling so I don't want the things to look the least bit out of place... I think it would be better to keep the viewer's interest.

**PLACEMENT**

On the left side of the building... I will place the sign so that it is easily seen from the side...

**Further Design**

STAYING PART

How do I want the viewer to follow the design? The 3D design of the building.

How do I want the viewer to follow the design? I will use a different colour to separate elements of my work, i.e. black, white, red, blue.

**Presentation Part**

The location in the room as the viewer places them.

How do I want the viewer to follow the design? I will use a different colour to separate elements of my work, i.e. black, white, red, blue.

I will make it as a point for the viewer to see as the background.

1

3

By having an accurate model, those who don't know much about architecture can instantly see what is going on. The model can be communicated easily. You'll see that the model is a great.

The model's detail and scale communicates of the design very easily. It will also make viewers' attention when it is that and placed in the context. Because in the world of advertising.

**Final Presentation**

The presentation of the model and the sketch is of my idea. I'll have a notebook with all the things I did. I'll have a notebook with all the things I did. I'll have a notebook with all the things I did.

I will make it as a point for the viewer to see as the background.

I will use a different colour to separate elements of my work, i.e. black, white, red, blue.
